NMO Report: Malta Association of Medical Physicists (MAMP)

1. The Association in collaboration with the University of Malta is developing a Masters in Medical Physics which will be based on the 'Qualifications and Curriculum Development Frameworks for the MPE in Europe' document being produced by the 'Guidelines on the MPE in Europe' project led by Complutense University, Madrid and EFOMP. The Ministry of Health has been approached by the University of Malta to provide funds for the running of the course and the response has been positive.
   The main problem that we will be facing will be to find training posts for our students following the Masters – we would appreciate if EFOMP can work on a system where traineeships can be offered by the more developed associations.

2. The Association is in discussions with the Ministry of Health for recognition of the profession.

3. Carmel J. Caruana, Secretary of the Association is Chair, Education and Training for EFOMP up to the end of 2012.

4. Carmel J. Caruana is on the Steering Committee of the 'Guidelines on the MPE in Europe' project with responsibility for the 'Qualifications and Curriculum Development Frameworks for the MPE in Europe' document.

   Carmel J. Caruana
   Secretary
   MAMP
